Claims 1-8 are cancelled.

- 9. (newly added) Method of non-invasive measuring of the temperature change of a target inside a body by transmitting an ultrasonic pulse to the target, subjecting a pulse reflected from the target to frequency analysis, and calculating the temperature change of the target therefrom, wherein a frequency spectrum of the reflected pulse is produced and the calculation of the temperature change is effected on the basis of harmonics appearing in said spectrum.
- 10. (newly added) The method of claim 9, wherein the calculation includes calculation of a quotient

wherein Ak0 represents the size of a frequency peak of a harmonic of number k, based on amplitude or intensity as measured at an earlier moment and Akn represents the size of a frequency peak of said harmonic as measured at a later moment n.

11. (newly added) The method of claim 10, wherein the temperature change is calculated according to the relationship

$$\Delta = k * quotient$$

wherein k is a constant determined empirically.

- 12. (newly added) The method of claim 10, wherein the quotient is calculated for different harmonics represented by frequency peaks in said spectrum.
- 13. (newly added) The method of claim 10, wherein the size of the harmonic is represented by the amplitude of the frequency peak representing the harmonic in the frequency spectrum.

10

- 14. (newly added) The method of claim 10, wherein the size of the harmonic is represented by the surface defined by the frequency peak representing the harmonic in the frequency spectrum.
- 15. (newly added) The method of claim 14, wherein the surface extends from a noise level defined by the frequency spectrum.
- 16. (newly added) Apparatus for non-invasive measuring of the temperature change of a target inside a body comprising means for transmitting an ultrasonic pulse to the target, means for receiving a pulse reflected from the target, means for frequency analysis of the reflected pulse, and means for calculating the temperature change of the target therefrom, means for producing a frequency spectrum of the reflected pulse, and means for calculation of the temperature change on the basis of harmonics appearing in said spectrum.
